

Joint Failure Analysis: Anatomical Patterns and Model Performance

(Which joints are hardest to compensate for?)

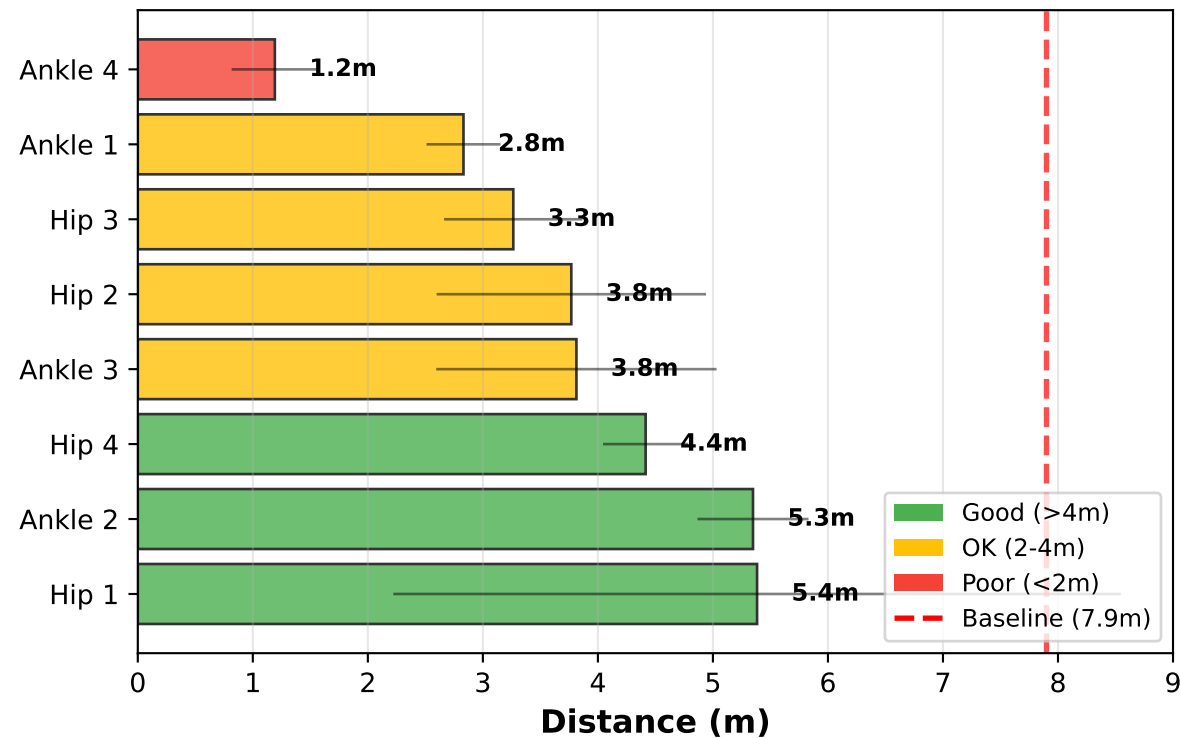

(a) Joint Type Comparison
Hips vs Ankles (Absolute Distance)

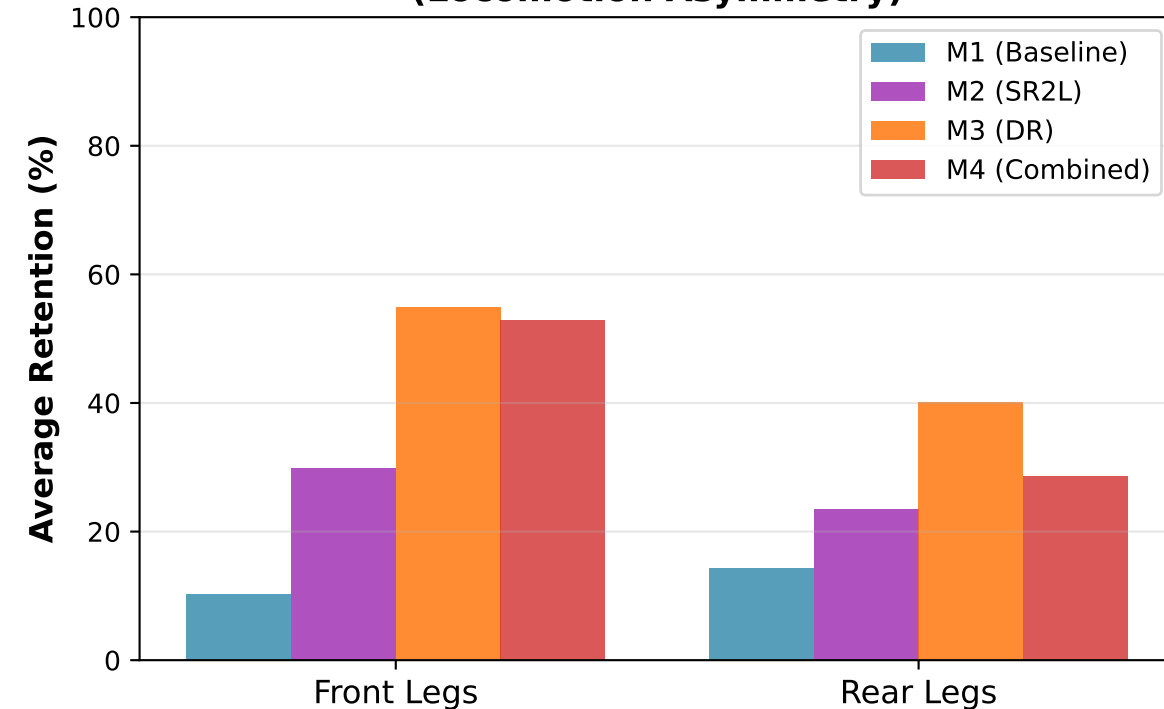

(b) Camera Position Effect
(Does visibility matter?)

(c) M3 (DR) Per-Joint Absolute Distance
(Ranked Best to Worst)

(d) Front vs Rear Legs
(Locomotion Asymmetry)

KEY FINDINGS: Ankles harder than hips | Rear legs harder than front | Camera position has minimal effect | M3 (DR) consistently best
