

Joint Failure Analysis: Anatomical Patterns and Model Performance

(Which joints are hardest to compensate for?)

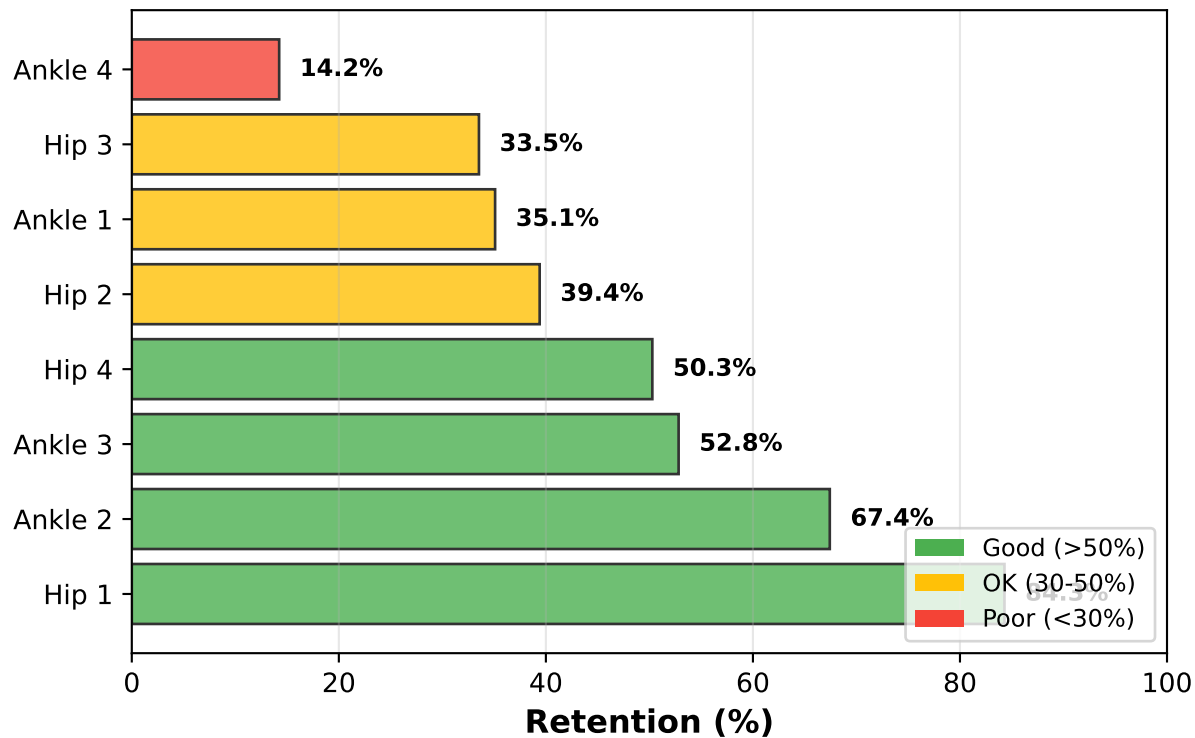

(a) Joint Type Comparison
Hips vs Ankles

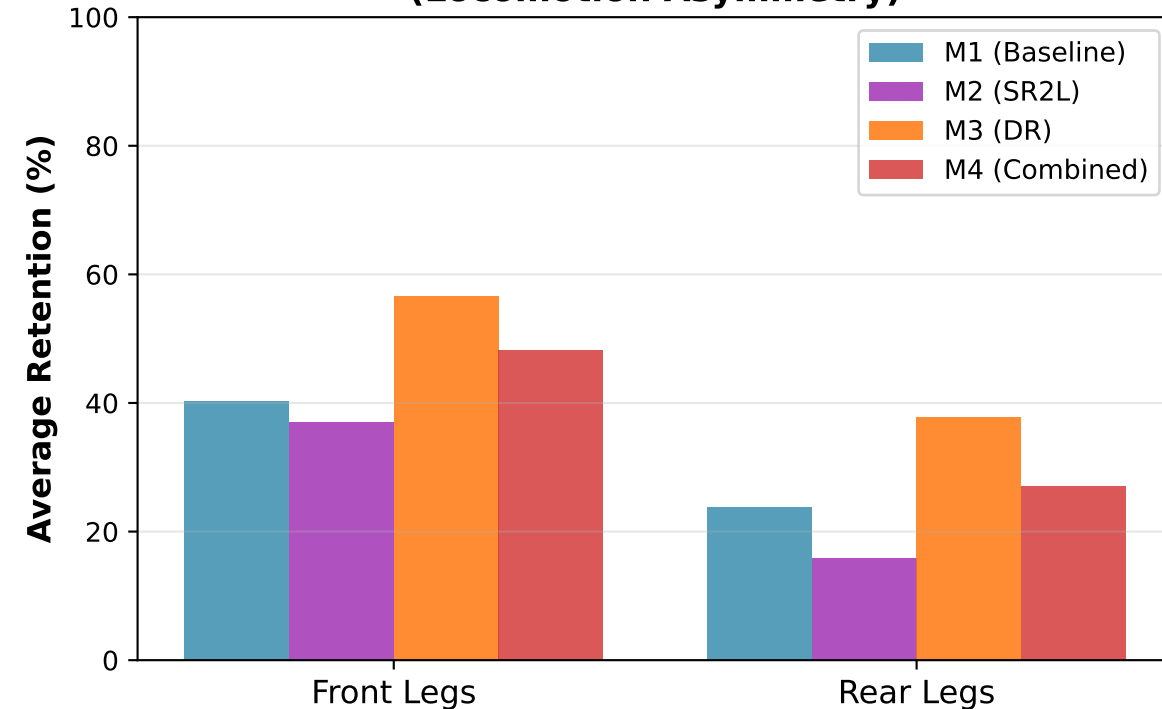

(b) Camera Position Effect
(Does visibility matter?)

(c) M3 (DR) Per-Joint Performance
(Ranked Best to Worst)

(d) Front vs Rear Legs
(Locomotion Asymmetry)

KEY FINDINGS: Ankles harder than hips | Rear legs harder than front | Camera position has minimal effect | M3 (DR) consistently best
